

Indicator Protectors Fitting Instructions (MPW-SVG-0135-03)

1, Note as per the website, these guards are designed for the Short Indicators, not the Long.

2, Loosen and remove the fixing screw in the indicator.

3, Next disconnect the indicators supply cable from the bike.

4, With the Indicator removed you can feed the cable in and through the Protector and seat it against the mounting surface so the holes line up.

4, Feed the cable back into the bikes panel and screw the Indicator with Protector back on to the bike.

5, Repeat Steps 2-5 for as many Indicators Protectors as you are fitting.

NOTE: In some instances it may be possible slide the Guard over the Indicator without having to disconnect the power cable.

Now go for a well-deserved test ride.
